

David Hudson

Software Developer

davidhudson@gmail.com
+64 27 869 0606

Available to work remotely or in Cairns, Australia from 19th Feb 2018

About me

I am a cross-paradigm, performance driven, Scala/Java Software Developer who specializes in meta-programming. With new languages and paradigms I can adapt to any team. I'm becoming increasingly aware of I am currently working on a Process Systems Enterprise, London, remotely from Palmerston North, New Zealand, as well as working in the scalameta time for open source.

Open Source

I have a passion for writing code, especially when it is consumed by a large number of users. I'm always looking for more open source community, either on Gitter or via PR's. Ideally I would like to work completely open source and believe that open source all their libraries where it is appropriate.

 [scalagen](#)

Author

WIP code generation library for Scala. Built on scalameta, scalagen supports any scalameta dialect, Scala Native/Scala 2.12.4 are all supported. scalagen can completely replace all scalameta/paradise annotation macros, and "most" scalar annotations.

 [scalameta](#)

Maintainer

Meta-programming library for Scala. Built with the idea that Scala's language tree's should be easy to manipulate. This centerpoint for most recent developments with Scala's tooling.

 [scalameta paradise](#)

Maintainer

Macro library for Scala. Now deprecated in favor of scalameta/scalagen (Annotation Macros) and scalacenter/macros (D

 [Elysium](#)

Author

A collection of macros for scalameta/paradise. On hold until scalagen goes 0.1, then the entire API will be converted.

Employment

Company: Electric Memory IT (EMIT)
Contracted To: Process Systems Enterprise (PSE)
Time Employed: June 2013 - Present

Based in Palmerston North, New Zealand, Contracting out to Process Systems Enterprise, which is based in London.

I am working on the gPROMS family of integrated modelling environments (IME's), designed for various engineers complex systems. The kernel is written in C++ and Fortran, with the UI written in Java. gPROMS is primarily a procedure that is used to run simulations/optimizations etc. Thus the IME's act much like an IDE would for a Software Developer. V such as Eli Lilly Pharmaceuticals and Shell Petroleum I take the quality of code I produce very seriously.

Projects

New Language Engine (NLE)

The purpose of this project was primarily to remove a large chunk of the remaining CORBA code in our codebase. Using Scala and Lexer, with Scala as the language of choice, we managed to build an fast, immutable, threadsafe and storage efficient

Moving from Maven to Gradle

Our build system is rather complex, we have multiple "code generation" steps, multiple JVM languages being used, external dependencies (obfuscation and encryption) and multiple repositories. The build was designed to be modular via Gradle plugins.

Flowsheet Routing

Our users were generating models in other applications, with 2000+ models and connections between them. The Swings GUI Thread (EDT) and thus blocked the user from working while it happened. For user-generated projects project load and trigger up to 8 hour GUI freezes. Of course, this is not acceptable, thus I moved all routing off the EDT and was undo. We had asynchronous edits that had to be managed within Swings very synchronous and sequential undo sy

Past Employment

Role: Salesman
Time Employed: 2014 - 2015

Role: Butchers Assistant/Checkout Operator
Time Employed: 2009 - 2013

Technical

Operating System

I prefer Unix based systems for general development, usually one of NixOS, Ubuntu, Fedora or OSX.

Version Control

I exclusively use git for version control. I am very competent with git and have written a number of internal scripts for it.

Languages, Libraries and Skills

Scala

I have been writing Scala code since 2012, working with it in industry for the past 2 years. I consider myself an expert and have given talks on Scala before. Most of my open source work has been creating and/or contributing to a large number of Scala libraries, but most commonly Cats, Monix, Circe and Scalafix.

Java

Java was the first language I learnt. Self taught while I was at high school I have been writing Java code since 2009. The codebase I work in is Java and I consider myself an advanced Java user.

Python

I use Python mostly for scripting and web scraping. I've attended multiple Kiwi Pycons and always enjoyed the Python community.

Javascript

I've written a lot of javascript, mostly during my time at university. I have experience ES5, ES6, Typescript and have written code in AngularJS, Angular and React, using tools such as NPM, Bower, Gulp and Webkit.

ANTLR

A large portion of my work recently has been writing ANTLR4 Grammars, a Scala AST to go with them and ensuring the code has been optimal. Due to this, I've subclassed and replaced large portions of the ANTLR code as it was non-optimal and much garbage for our uses.

Ansible

I have written multiple sets of Ansible scripts, for provisioning build machines and setting up dev environments.

Gradle

Due to being in charge of the Maven => Gradle porting of our build system at work, I have become a competent Gradle developer.

Category theory

Last year I taught myself basic category theory. I wanted to get a ground up understanding of category theory with the Cats library, I could understand the reasoning and terminology. In particular, I wanted to develop an understanding of Monads and Natural Transformations. I still want to do far more research into this field and personally believe it is every Computer Science curriculum globally.

Functional Programming

I believe that Functional Programming is a far too common of a phrase these days, when a lot of people mean "pure functions". Functional programming is not just about having functions representable at the type level. I use pure functions and try to be as pure as possible, handling effects at the type level, where it does not affect Readability or Performance. I can proudly say that I have not deliberately used the keyword "null" in my code, for well over a year.

IDE's and Editors

IntelliJ IDEA

I use IntelliJ every day for most development. For Java specifically, I struggle to see a reason to use anything else.

Webstorm

Go to for Web development, although I do not feel an IDE is anywhere near as useful for web dev as it is for Java. I use a text editor instead.

Atom

My usual text editor, I use it quite a bit for web development as well.

Gedit

I use Gedit for Git related work. Atom starts too slow and I have not yet spent enough time with Vim to use that.

Profilers

Yourkit

I would recommend Yourkit to anyone, Yourkit makes optimizing code a breeze.

VisualVM

I stopped using VisualVM after we purchased Yourkit. Yourkit really is far superior here.

Conferences

Attending as many conferences as possible I enjoy networking and learning how the industry is evolving. I have been to many including Kiwi Pycon, Kiwicon X and NZJSCon. One of my highlights was presenting a lightning talk on GitPython at KiwiCon. I will be attending Linux Conference Australia in Sydney at the end of January 2018.

Community

I attend as many talks and events as possible, via Massey University, IT Professionals of New Zealand (ITPNZ) or the Palmerston North Development Meetup Group. Once I have arrived in Cairns I will be joining IT Professionals Australia. I have also given a talk on Scala to around 30 people at the meetup group.

Education

Massey University

Qualification: Bachelor of Information Science. Computer Science Major

Status: Compulsories complete in 2015

Started working fulltime before completion currently finishing electives via part-time study.

New Plymouth Boys' High School (NPBHS)

Qualification: NCEA level 3

Status: Complete in 2011

References

Personal phone numbers of references available on request.

Duane Griffin

Relationship: Cofounder of Electric Memory IT
Location: Palmerston North, New Zealand
Timezone: New Zealand Standard Time (NZST - UTC+13)
Email: duaneg@psenterprise.com
Phone: ???

Duane is my current boss. He has worked for PSE for 14+ years. Currently heads on the NLE project. Ask Duane about my Scala knowledge and/or involvement in NLE.

Luke Usherwood

Relationship: Cofounder of Electric Memory IT
Location: Hungary
Timezone: Central European Time (CET - UTC+1)
Email: lukeu@psenterprise.com
Phone: ???

Luke worked for a short time in New Zealand when I first started. He has since moved back to Hungary. Ask Luke about the flowsheeting work I have done. He also has worked on NLE and I send a lot of code reviews his way.

Andrew Bevan

Relationship: Head of Software Development, Process Systems Enterprise
Location: London, England
Timezone: Greenwich Mean Time (GMT - UTC+0)
Email: andrewb@psenterprise.com
Phone: +44 20 8563 0888

Andrew is the Head of Software Development. If you wish to know any non-technical information about how I have worked well I work remotely, feel free to ask him.

Steven Carpenter

Relationship: Ex Manager of Dick Smith Palmerston North
Location: Palmerston North, New Zealand
Timezone: New Zealand Standard Time (NZST - UTC+13)
Email:
Phone: ???

Steven (Steve) was my boss at Dick Smith before I started working as a Software Developer. If you would like to know about my retail experience, including customer interactions, feel free to ask Steve.
